

HORTICULTURE

An art as old as the Garden of Eden and a science as new as tomorrow, horticulture deals with the development, growth, distribution, and utilization of fruits, vegetables, and ornamental plants. Horticulture is a hobby to some and a profession to others. It enriches our lives with nutritious, flavorsome foods and the aesthetics and utility of ornamental plants. In the Horticulture program you will learn the relationships between horticulture and natural, ecological processes, and develop a responsible horticultural approach toward the environment.

Courses in the curriculum have been partitioned into groups of similar courses called clusters. Requirements for the Bachelor of Science in Horticulture (Scientific Track or Business Track) are listed below.

Career opportunities within the Horticulture/Green Industry are excellent. In particular, the degree can lead to positions in the environment, landscape, and lawn care fields, as well as within education and government. The baccalaureate degree provides opportunities for further career advancement and personal satisfaction.

BACHELOR DEGREE GRADUATES
