KALTURA - EMBEDDING A VIDEO IN THE BB TEXT EDITOR

Kaltura is the video repository for the University of Cincinnati. Video stored in Kaltura are FERPA, HIPPA, and TEACH Act compliant ready. In the steps below we will embed a video we have already created in Blackboard using the text editor. If you have not done so already, we recommend reviewing the Video Recording in Blackboard help document prior to walking through this document.

Step 1: Navigate to the location you would like to embed your video. This could be a blog, wiki, discussion board, course module, etc. This is literally anywhere you see the text editor toolbar pictured below. You may need to click the “Write Submission” button to access the text editor. If you only see the first row of buttons then click the double chevron button at the top right to expand the toolbar.

Step 2: To access your private Kaltura video library click the Mashups button.

Step 3: Then Click Kaltura Media option in the menu.

Step 4: The Search for a Kaltura Media window will appear. Under each video are two buttons: Preview and Select. Click Preview to watch any video prior to inserting. Click Select to denote the video to be inserted. Keep in mind that although you can insert multiple videos, only one video can be inserted at a time.

Step 5: The Create Mashup Item window will appear. Under section 1, you can click the Preview button to watch the video to ensure you have the correct video. Under section 2, the mashup options are on by default. You may hide all media information by clicking the no radio buttons. Once happy with your selection click the Submit button to insert the mashup into the text editor.

Step 6: Click Submit to complete your content item.
