Security Checks

Due to the tragic events of September 11, 2001 in the United States, many visa applicants will be checked against databases maintained by the Federal Bureau of Investigations (FBI). This security procedure will delay visa issuance by 20 days or more. If you are from a country on the Department of State’s List of State Sponsors of Terrorism below or are studying in a field on the Critical Fields List below, you will likely be subject to a security check.

Department of State’s List of State Sponsors of Terrorism

- Cuba
- Iran
- Sudan
- Syria

Critical Fields List

1. Conventional Munitions: technologies associated with warhead and large caliber projectiles, fusing and arming systems, electronic counter measures and systems, new or novel explosives and formulation, automated explosive detection methods and equipment.

2. Nuclear Technology: technologies associated with the production and use of nuclear material for peaceful and military applications include. This includes materials, equipment or technology associated with nuclear physics or nuclear engineering.

4. Rocket System and Unmanned Air Vehicle Subsystems: technologies associated with propulsion including solid rocket motor stages and liquid propellant engines. Other critical subsystems include re-entry vehicles, guidance sets, thrust vector controls and warhead safing, arming and fusing.

5. Navigation, Avionics and Flight Control Usable in Rocket Systems and unmanned Air Vehicles: These capabilities directly determine the delivery accuracy and lethality of both unguided and guided weapons. Associated technologies include: Internal navigation systems, Tracking and terminal homing devices, Accelerometers and gyroscopes, Rockets and UAV and flight control systems, and Global Positioning system (GPS).
6. Chemical, Biotechnology and Biomedical Engineering: associated technologies used to produce chemical and biological weapons.

7. Remote Sensing, Imaging and Reconnaissance: technologies associated with satellite and aircraft remote sensing including military and intelligence reconnaissance activities, drones and remotely piloted vehicles.

8. Advanced Computer/Microelectronic Technology: Advanced computers and software that play a useful role in the development and deployment of missiles and missile systems, and in the development and production of nuclear weapons, over-the-horizon targeting, airborne early warning targeting, and Electronic Countermeasures (ECM) processors.

10. Information Security: technologies associated with cryptographical systems to ensure secrecy of communications video, data and related software.

13. Marine Technology: technologies associated with submarines and deep submersible vessels, marine propulsion systems designed for undersea use and navigation, radar, acoustic/non-acoustic detection.

15. Urban Planning: technologies associated in the construction or design of systems necessary to sustain modern urban societies including architecture, civil engineering, community development, environmental planning, geography, housing, land use and urban design.
