

Android 2.0 – 2.2 Securewireless Setup Guide

1. Select the Menu Icon while at home screen on your device, then click on **“Settings”** icon

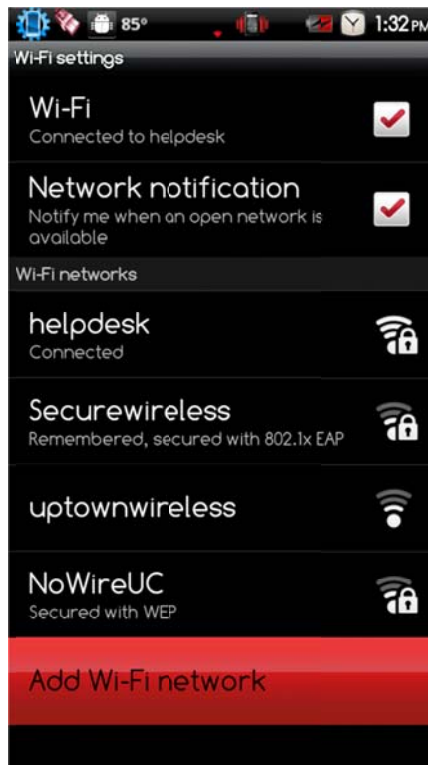

2. Click on **“Wireless & Networks”** menu

3. Make sure that the **“Wi-Fi” feature** is checked. Now Click on the **“Wifi Settings”** menu

4. Click the **“Add Wifi Network”** menu

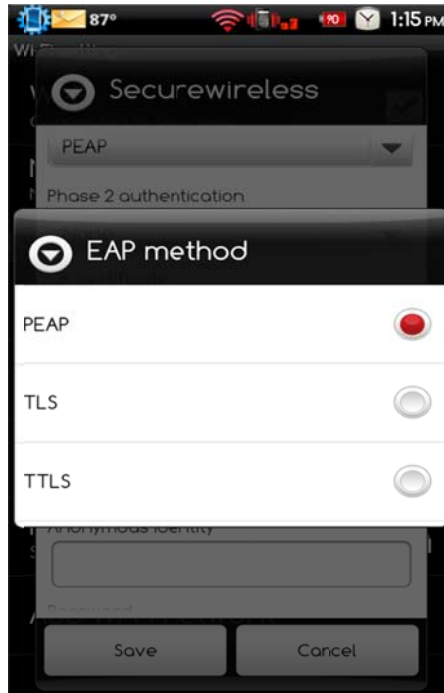

5. At the “Add Wifi network” menu, enter the following in the Network SSID field: **Securewireless**
Note: this is case-sensitive.

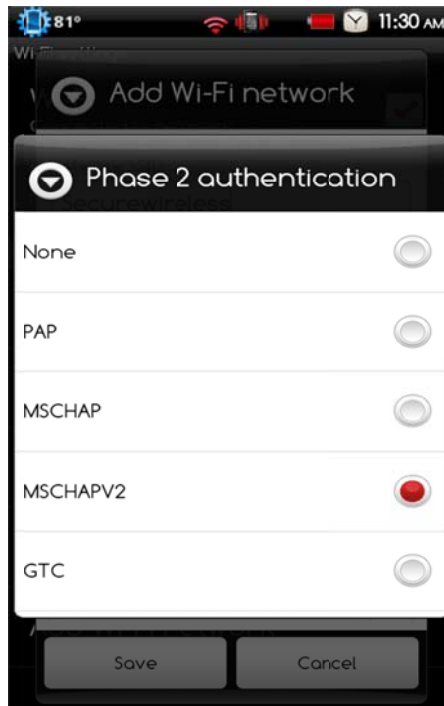

6. From the “Security” menu please select “802.1x EAP”

7. Now some additional fields will appear, for the “EAP method” please choose “PEAP”

8. In the “Phase 2 authentications” menu please select “MSCHAPV2”

9. Your **“Add Wi-Fi network”** menu should now look like the picture below.

10. For the CA certificate and User certificate fields leave the default selection of **“(unspecified)”** selected. Next enter the username in the identity field, leave the anonymous identity blank, and your password in the password field. Now click the save button.

Note: In the event you need to modify your connection to reflect a recent password change Long-Press (hold down) on Securewireless, choose “Modify Network”
