

### iPhone, iPod, and iPad Securewireless setup guide

Requirements: *iPhone or iPod Firmware Version 2.0* If you do not have this version, please plug the iPhone or iPod into your computer and update the firmware with iTunes.

1. On the home screen, click the “**Settings**” icon.

2. Click on the “**Wi-Fi**” icon.

3. Make sure that the **Wi-Fi** feature is set to “ON.” Next, click “**Other...**” from the Choose a Network list.

4. At the “Other Network” menu, enter the following as the Network Name: **Securewireless**

**Note:** this is case-sensitive.

5. Click on the **Security** tab. At the next menu, select “WPA2 Enterprise” for the Security Type, and then click the “Other Network” button in the top left-hand corner.

6. At the Other Network screen, click on **Username**.

- At the next screen, enter your **Username** and **Password**. This is the same username and password for the Central Login Service. When the information has been entered, click **Join** in the lower right-hand corner of the device.

- Next, you should see a screen like the one below. Click on **Accept** to accept the Certificate for the acswlan.ad.uc.edu server.

**Note:** If the screen does not change for two minutes after you click Accept, click Cancel in the top right corner.

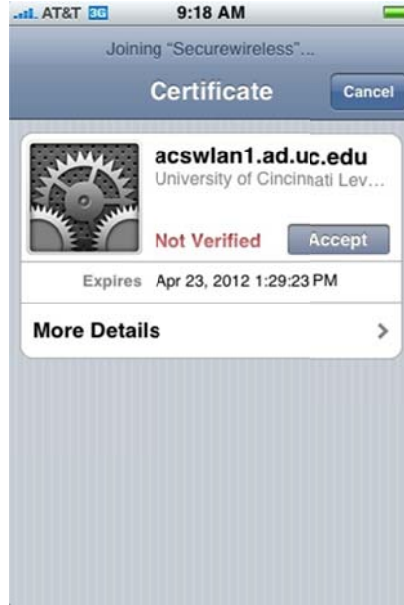

9. If you had to click cancel, click the **Securewireless** entry in the Choose a Network Section.

10. Enter your username and password again and click **Join** lower right-hand corner of the device.

11. Next, you should see a screen like the one below. **Accept** the certificate for the acswlan.ad.uc.edu server. You should now be connected to the Securewireless network.
