SAS 9.3 Workstation Sample Installation.

Installation may take up to an hour or more so plan accordingly

1. Insert DVD to start the SAS Deployment Wizard. If it does not start using auto play, run the setup.exe program on the DVD.

2. Choose the Language. Click OK.

3. Wait at the SAS Deployment Wizard splash screen.

5. Choose Install SAS Foundation and Related Software. Click Next.

6. Select Products to Install - Products should be already selected. Click Next.

7. Select SAS Foundation Products – should already be selected. Click Next.
8. The license file is on the DVD and should be displayed. Click Next.

9. Select the languages you want supported. Click Next.

10. Select the Java Runtime Environment as the recommended JRE by SAS. Click Next.
11. It will check the system for compatibility with SAS 9.3
12. Click start to initialize the installation.

13. You may be required to reboot.
14. Finally the installation starts and it will prompt you for disks 2 and 3 at required intervals.

15. Click next once the installation is complete.
16. Select either option according to your preference and click on Next.

17. You will see a list of SAS support sites for reference. Click Finish.
