

UC Information Security is pleased to offer

Vulnerability Scanning Services for Web Applications and Network Systems and Devices

Using Genzic's Hailstorm for Web applications and Rapid7's NeXpose for network systems and devices, you can feel comfortable that you are discovering and remediating vulnerabilities before they are exploited. Both tools allow us to provide you with:

- A list of vulnerabilities
- Severity ratings for the vulnerabilities
- A detailed report of remediation information

**This is currently a free service offering
provided by your UC Information Security
team.**
