

Installing Microsoft Windows XP Professional on a Mac

Creating a CD from the Disk Image

- 1.) Download the disk image.
- 2.) In Finder click on the disk image (filename.iso).
- 3.) Choose File->Open With->Disk Utility from the top menu.
- 4.) Once Disk Utility Opens, click on the file in the side pane and then click the “Burn“ button in the toolbar.
- 5.) Insert a blank CD-R.
- 6.) Click Burn.

Installing Windows XP Professional w/SP3

- 1.) Verify system requirements and install updates if needed.
- 2.) Run Boot Camp Assistant located in the Utilities folder.
- 3.) At the Introduction screen click Continue.
- 4.) To adjust the Windows partition click and drag the slider, or click “Use 32 GB” to use the default. Click Partition to continue.
- 5.) Insert the Windows XP w/SP3 CD into the drive and click Start Installation.
- 6.) After the install completes, follow the onscreen instructions to setup a user account.
- 7.) Once Windows boots to the desktop restart the computer and hold down the mouse/trackpad button. This will eject the CD. Alternatively, you can open My Computer and choose File-> Eject, but this feature may not work until after a reboot from the initial installation of Windows XP.
- 8.) Insert your Mac OS install CD to install Boot Camp and the necessary drivers.

**To switch between Mac OS and Windows hold down Alt/Option during boot.

** Depending on the model Mac you are using Right Click MAY be Three Fingers OR Two Fingers. If Three Fingers are required to achieve a Right Click download the following update from Apple.

Multi-Touch Trackpad Update for Windows XP & Vista

To remove Windows XP from your computer:

- 1.) In Mac OS X, quit all open applications and log out any other users on your computer.
- 2.) Open Boot Camp Assistant in the Utilities folder in the Applications folder.
- 3.) Select “Restore the startup disk to a single volume” and then click Continue.
