**09300D - TILE**

**A. FLOOR TILE**

1. Where ceramic tile is specified for toilet room floors, colors shall be specified as a mixed design. Very light and very dark colors are not desirable. Floor grout should be a dark color; white floor grout is prohibited.

2. If ceramic mosaics are used, specify by giving tile sizes.

3. Specify floor tile that has a static coefficient of friction of 0.6 for level floors and 0.5 for ramped surfaces.

4. Indicate location of floor control joints.

**B. WALL TILE**

1. Glazed ceramic tile is preferred for tile walls, except where floor tile with cove base is used. Cove base may be unglazed. Any exceptions shall be approved by University Architect.

2. Specify a cementitious backer board for metal stud walls; do not use standard gypsum board. Also specify Dry Set or Latex Portland Cement mortars rather than organic adhesives in wet areas.

3. Specify 20 gauge (minimum) studs at 16” o.c. in areas to receive wall tile.

**C. EXTRA MATERIALS**

1. Submit extra material for all types of tile. Extra material should be two to five percent of the amount used on the project.
