Securewireless Setup Instructions for Snow Leopard (10.6), Lion (10.7) & Mountain Lion (10.8)

1. First, click on the Apple menu in the top left-hand corner of you screen. Next, select **System Preferences** from the menu.
2. In the System Preferences window, click on the **Network** icon.
3. In the Network window, click on the **Wi-Fi** icon on the left-hand side of the window. Next, click on the **Advanced…** button in the lower right-hand corner.

4. Next, on the Advanced-Network window (shown below), make sure that Securewireless is not in the Preferred Network list. If there is a Securewireless entry, select it and click the (-) icon. Next, and click on the (+) icon to re-configure the network.
5. You will now be prompted to add a Wi-Fi network profile. Enter the following information:
   
   **Network Name:** Securewireless  
   **Security:** WPA2 Enterprise

   (Note: The Network Name is case sensitive)
6. After you change the security type, you will then be prompted to enter additional information for a **Username** and **Password**. This is the same username/password combination you use for the Central Login Service. Leave the selected 802.1x setting on automatic. Next, click **OK** in the lower right-hand corner of this menu.
7. Securewireless should be listed first in the Preferred Networks list. If it is not, drag Securewireless to the top. Next, click the OK button.

8. Next, turn off the Wi-Fi by clicking the Turn Wi-Fi Off button.
9. Next, you will be prompted if you wish to make system changes in the following dialog box. Select **Apply** from the options available.

11. During the authentication phase, you will be prompted to accept a certificate from amigopod.ad.uc.edu. Click Continue to accept this certificate, as it is required to connect to the network.

12. You will then be prompted to type in your Mac Username and Password to apply changes to the Certificate Trust Settings. Next, Click Update Settings.
12. Your status should be **Connected** under **Wi-Fi** on the left-hand menu. Your **802.1x** profile should be set to **Default**, shown next to the Disconnect button.
