0-9

1 to N

The sorting order from the first page to the last, opposite of N to 1.

Also known as normal order

2 in 1

An imposition where the first and second images are on a single sheet of paper.

2 Repeat

An imposition that duplicates the image on a single sheet of paper.

Also known as step repeat.

2-Up

An imposition where two images are on a single page.

4-up

An imposition where four images are on a single page.

A

Accordion Fold

A fold where each parallel fold is opposite of the last fold, creating an accordion-like effect.

Account String

A series of numbers that make up a person or departments individual account number for billing, commonly associated with the University of Cincinnati.

A-Frame

A sign holder that, when open, forms the appearance of a capital "A", often used outdoors.

Also known as a sandwich board sign

Against the Grain

Folding or feeding sheets of paper at a right angle to the grain of the paper.

Also known as crossgrain

Alignment

The act of aligning two or more pages together, often for two-sided printing.

Also known as justify

Artwork

Digital materials composing of an image, artwork, text, or other elements.

B

B/W

An acronym for Black and White, this is a type of printing that uses only black toner/ink in grayscale.

Also known as black

Backing Sheet

A protective sheet on the back of self-adhesive or cling substrates that is peeled off before mounting.

Backlit Paper

A substrate used for light or LED casings to illuminate the print from behind.

Bi-fold

A fold where a sheet is folded in half vertically or horizontally.

Also known as half-fold

Binding

The way a book is held together such as staples, coil, comb, glue, tape, and more.

Binding Edge

The side or edge of a book where binding is located.

Black

A type of printing that uses only black toner/ink in grayscale.

Also known as black and white

Black and White

A type of printing that uses only black toner/ink in grayscale.

Acronym: B/W

Also known as black

Bleed

Any element such as color, images, or artwork that extends past crop marks or the edge of the page, often requires cutting.

Bleed Marks

Similar to crop marks, a small or thin line in each corner of an image indicating the edge of the bleed.

Bond

A paper that is usually high in cotton fiber, used most often with stationery and basic prints.

Also known as writing paper

Book

A set of printed sheets with some form of binding such as coil, comb, staples, etc.

Booklet

A book binding that folds all pages in half and staples inside the fold, most magazines use this binding.

Also known as a saddle stitch book

Booklet Envelope

An envelope that opens on the long edge.

Branding

An often strict set of guidelines established by an organization or group to ensure the consistent appearance of digital or physical materials. This can include specific fonts, artwork, marketing materials, and more.

BRE

An acronym for Business Reply Envelope, a pre-addressed envelope included in mail to allow the receiver to reply to the sender free of charge.

Brightness

1. In paper, it is how reflective the light is on the sheet of paper.
2. Digitally, it is how white or washed-out the overall image can be.

Bristol

A thick paper with a smooth finish.

Brochure

A print that is folded and often used for informational or marketing material.

Also known as a pamphlet or leaflet

Bulk Mail

Mail that is prepared in large volumes or quantities as a specific class at a reduced postage cost.

Business Reply Envelope

A preaddressed envelope included in mail to allow the receiver to reply to the sender free of charge.

Acronym: BRE

C

C1S

An acronym for Coated 1 Side, the gloss or coating on only one side of paper.

C2S

An acronym for Coated 2 Sided, the gloss or coating on both sides of paper.

Caliper

Similar to gsm and lb, the standard unit of measurement for paper thickness expressed in microns, often seen as 10pt, 12pt, etc.

Canvas Paper

A substrate that is heavyweight with a textured coated surface that closely replicates a painting canvas.

Carbonless Paper

A thin, chemically treated paper that allows the transfer of writing, scratches, or impressions from one sheet to another, often printed in sets and as 2-part, 3-part, or 4-part.

Also known as NCR

Cardstock

A paper that is thicker than average copy or text weight paper.

Also known as cover stock and cover weight

Carriage

1. A device within a printer that feeds the paper or material.
2. A device in some printers that houses the print head.

Case

A large box of paper containing multiple reams of paper, often 5 or 10 reams per case.

Catalog Envelope

An envelope that opens on the short edge.

Click

The count for each cycle of printing; a single-sided print would be one click.

Also known as an impression

Cloth

A substrate used for printing that can be easily folded without making indents.

Also known as textile or fabric

CMYK

The four basic colors used by most color printers consisting of: Cyan (C), Magenta (M), Yellow (Y), and Black (K).

Coated 1 Side

The gloss or coating on only one side of paper.

Also known as C1S

Coated 2 Side

The gloss or coating on both sides of paper.
Also known as C2S

Coated Paper

A paper that has a coating on the surface of the sheet which produces a smooth finish, often glossy.

Coil Binding

A binding that uses a metal or plastic spiral through multiple holes. This allows the pages to lay flatter than other binding methods as well as spin 360 degrees around the spine.

Also known as spiral bind

Collate

The gathering or sorting of materials, blank sheets, or printed pages in a specific order.

Also known as sort

Color

The use of various colors, including black, to create vivid images and text.

Color Bars

Squares of color that are used to measure the color quality of a print or proof.

Comb Binding

A binding that punches rectangular holes along the binding edge. A plastic comb is opened, inserted through the holes, and closed. This allows the comb to be reused and for pages to be added or removed.

Compression

Reducing the file size of a document or image by disregarding less important information or flattening layers.

Contour Cutting

Cutting in a specific outlined shape or design path rather than a straight line.

Also known as cut path and trim path

Contrast

The gradient of the highlights, mid-tones, and shadows in an original or replicated image.

Controller

The software that allows you to print directly to the printer.

Also known as driver

Copy

An exact replica or duplicate of an existing image or print.

Copyright

An exclusive right granted by law for intellectual properties such as an idea, work of art, or creation, similar to a trademark.

Also seen as the symbol ©

Coroplast

A plastic board with hollow channels within the material making it lightweight and waterproof, often used outdoors.

Also known as corrugated

Corrugated

A plastic board with hollow channels within the material making it lightweight and waterproof, often used outdoors.

Also known as coroplast

Cover

A paper or material that covers the front and/or back of a book.

Cover Stock

A paper that is thicker than average copy or text weight paper.

Also known as cardstock and cover weight

Cover Weight

A paper that is thicker than average copy or text weight paper.

Also known as cardstock and cover stock

Coverage

The amount of printing ink that covers the surface of a printed sheet, often referred to as light, medium, or heavy.

Cracking

The physical cracking or splitting of paper on a fold. More common with folds on thicker paper and/or folds containing toner. This can be reduced by scoring the paper along the fold line.

Crack-n-Peel

A self-adhesive material covered by a backing sheet.

Also known as label and pressure-sensitive

Creasing

Indenting paper in a straight line to make folding easier, and reduce cracking.

Also known as scoring

Creep

An effect of multiple pages folded together in a saddle stitch book, forcing the pages to extend further outward the closer each page gets to the middle. This can be eliminated with trimming/cutting.

Crop

The elimination of sections of a digital image, often used on photographs and images.

Crop Mark

Similar to bleed marks, a small or thin line in each corner of an image indicating where to cut.

Also known as a cut mark, cut line, or trim mark

Crossgrain

Folding or feeding sheets of paper at a right angle to the grain of the paper.

Also known as against the grain

Curl

An issue of a printed sheet bending in a cylinder or wave shape after printing.

Cut and Stack

An imposition where the first half of a set is printed on the left side of a sheet of paper and the second half is printed on the right. This allows the stacks to be trimmed and placed on top of each other to create a full set.

Cut Line

Similar to bleed marks, a small or thin line in each corner of an image indicating where to cut.

Also known as a cut mark, crop line, or trim mark

Cut Mark

Similar to bleed marks, a small or thin line in each corner of an image indicating where to cut.

Also known as a crop mark, cut line, or trim mark

Cut Path

Cutting in a specific outlined shape or design path rather than a straight line.

Also known as a cut contour and trim path

Cutting

Slicing a sheet of paper or a stack of pages with a sharp blade to achieve a desired size or appearance.

Also known as trimming

D

Database

A software that houses the digital grouping of all information pertaining to a specific person, organization, job, etc. to keep it organized and consistent.

Deboss

To press an image into paper with a die to create an indent, the opposite of emboss.

Density

The amount of darkness within a digital or physical image.

Die

A device used to cut, score, stamp, emboss or deboss sheets of paper.

Digital Printing

Printing without plate systems that produces the images onto the sheet. All data is electronically transferred to the machine drivers and onto the sheet of paper.

Dirty Copy

An error that can occur where excess toner or ink is on the paper.

Door Wrap

A removable self-adhesive substrate used to stick to the entire surface of a door.

Dots Per Inch

1. Digitally, the measure of the resolution of an image.
2. Physically, the measure of dots of ink per inch on a printed sheet of paper.

Acronym: DPI

Double-Sided

Printing on both sides of a single sheet of paper.

Also known as duplex

DPI

An acronym for Dots Per Inch.

1. Digitally, the measure of the resolution of an image.
2. Physically, the measure of dots of ink per inch on a printed sheet of paper.

Drilling

Creating one or multiple holes through a single sheet or a stack of paper for binding.

Also known as hole punching

Driver

The software that allows you to print directly to the printer.

Also known as controller

Drum

An electronically charged unit within a printer that adheres the toner to the sheet of paper.

Duplex

Printing on both sides of a single sheet of paper.

Also known as double-sided

E

Emboss

The creation of a raised, three-dimensional design on paper by using ink, foil, or a die, the opposite of deboss.

Engineering Bond

A thin substrate bond used for drafts and engineering designs.

EPS

An acronym for Encapsulated PostScript, a file format that transfers digital images or graphics with compatible programs and applications.

Estimate

A rough pricing calculation for the completion of a print project.

Also known as a quote or quotation

Extent

The number of pages in a book, magazine, or other printed job.

Also known as page count

F

Fabric

A substrate used for printing that can be easily folded without making indents.

Also known as textile or cloth

Face Down

The orientation of paper that has the front side of a finished piece facing down.

Face Up

The orientation of paper that has the front side of a finished piece facing up.

Fastback

A binding that uses a thin strip of synthetic cloth to bind the edge of the book with glue when heated.

Also known as tape binding

Fax

The scanning of a sheet of paper and sending it to a receiver via a phone line.

Fiery Command Workstation

A software controller that allows the setup and printing of color prints.

File

Digital data that composes an entire image, artwork, text, or other elements.

Finish

The surface quality or appearance of a sheet of paper, often referenced as matte or gloss.

Finished Size

The final size of a printed piece after cutting and/or folding.

Finishing

Options such as binding, folding, cutting, etc. performed after printing is completed.

Fit to Print

The act of digitally increasing or decreasing an image's size to proportionately fit on a sheet of paper.

Flat Size

The size of an image after printing and trimming, but before folding.

Fleet

The grouping of multiple printing machines.

Floor Cling

A textured self-adhesive substrate capable of withstanding foot traffic.

Also known as a floor sticker

Floor Sticker

A textured self-adhesive substrate capable of withstanding foot traffic.

Also known as a floor cling

Flyer

A printed sheet used for advertisement or information.

Also known as a handbill or hotcard

Foam Board

A sturdy or rigid board with a foam core, often used for easel signs.

Foil

A thin metal sheet applied to paper to give text or images a metallic finish, often gold or silver.

Foil Stamping

The process that applies foil to a printed image.

Font

The digital assortment of letters, numbers, punctuation, etc. of a given size or design.

Format

The style, size, margins, printing requirements, etc. of a digital or physical image.

G

Gang-Up

An imposition where two images or pages are placed together on a single sheet.

Gap

The blank space or margin between the printed images and/or the binding.

Also known as a gutter

Gate Fold

A fold where the outer panels fold inward toward the center of the middle panel, creating the appearance of a gate.

Gator Board

A sturdier version of foam board that requires lamination for mounted images.

Ghosting

A fault where a printed image appears lighter than the previous page and may continue through the set.

Gloss

The shiny coating on a sheet of paper, ink, or laminate, opposite of matte.

Grain

The line or direction of fibers within a sheet of paper.

Graphic

A visual element that supplements the text, making the layout clearer and more interesting.

Also known as an image

Grayscale

Tones of gray ranging from white to black.

Grommets

A thin ring of various sizes used to reinforce holes and prevent wear and tear, often metal in material and used to hang posters or banners.

Grouping

Combining sheets in a set based on the page number rather than in sequential order.

Also known as uncollated

GSM

An acronym for Grams per Square Meter, similar to lb. This is a standard unit of measurement for paper weight, or thickness, often seen as 75gsm, 216gsm, etc.

Guillotine

A cutter that has a sharp blade that drops down to cut paper.

Gutter

The blank space or margin between the printed images and/or the binding.

Also known as a gap

H

Half-Fold

A fold where a sheet is folded in half either vertically or horizontally.

Also known as bi-fold

Handbill

A printed sheet used for advertisement or information.

Also known as a flyer or hotcard

Hard Copy

A physical printed image used for duplicating.

Hobby Knife

A blade mounted onto a pen-like aluminum body used for precision trimming by hand.

Also known as a utility knife, precision knife, and x-acto knife

Hole Punching

Creating one or multiple holes through a single sheet or a stack of paper for binding.

Also known as drilling

Horizontal

A document layout where the width is greater than the height, opposite of portrait.

Also known as landscape

Hotcard

A printed sheet used for advertisement or information.

Also known as a flyer or handbill

House Sheet

The stock of paper regularly kept in the print shop.

I

ID Badge

A small printed card with a person's name, information, or picture designated by an organization or business.

Also known as a pocket card

Image

A visual element that supplements the text, making the layout clearer and more interesting.

Also known as a graphic

Image Area

The section of a digital or physical sheet that houses the image or artwork.

Image Shift

The shifting of an image on a sheet of paper, can occur during digital printing.

Imposition

The positioning of pages before or after printing, folding, and cutting so all pages appear in proper sequential order.

Impression

The count for each cycle of printing; a single-sided print would be one impression.

Also known as a click

Index Paper

A lightweight cardboard paper that can be easily written on.

Indicia

The image or text pre-printed on mailing pieces in place of the stamp.

In-House

Any activity or service that is completed within the organization rather than by an outside provider.

Ink Cartridge

A device within a printer that houses the ink used for printing.

Insert

A printed or blank sheet placed inside another printed piece such as a packet, magazine, or book.

Interrupt

To stop or pause a print job in process.

Invoice

An itemized bill for a completed print request.

J

Jam

An issue that occurs when paper or other materials get stuck, lodged, or break and cannot be passed through the machine.

Job List

The data log showing what has been printed.

Job Number

A unique code dedicated to a specific print request. Used to keep track or retrieve data during the printing process.

Job Ticket

A digital or physical page that outlines information needed for a print request.

Jog

To vibrate or shake a stack of sheets so they are tightly aligned in a neat stack.

JPEG

An acronym for Joint Photographic Experts Group, a file format often used for photos, images, and artwork that compresses into a smaller file size, often degrading the quality. This format is used most for image files.

Justify

The act of aligning two or more pages together, often for two-sided printing.

Also known as alignment

K

Kerning

The narrowing or lengthening of space between letters and characters of a font.

Kraft Paper

A sturdy brown paper used for packaging prints.

L

Label

A self-adhesive material covered by a backing sheet.

Also known as pressure-sensitive and crack-n-peel

Laminate

A thin plastic sheet applied to paper to make it more rigid, durable, and waterproof. Laminate can come in both gloss and matte finishes as well as various thicknesses.

Also known as lamination

Landscape

A document layout where the width is greater than the height, opposite of portrait.

Also known as horizontal

Large Format

The printing of any material that is larger than a digital or offset printer, typically larger than 12"x18".

Also known as wide format

Layout

A rendition that shows the placement of images, text, and artwork.

Lb

Similar to GSM, a unit of measurement for the weight of 500 sheets of paper, indicating the weight or thickness of a sheet of paper, often seen as 20#, 80#, etc. or as 20lb, 80lb, etc.

Also known as pound

Leaflet

A print that is folded and often used for informational or marketing material.

Also known as a brochure or pamphlet

Ledger Paper

A strong durable paper with good erasing quality, used often with record keeping.

LEF

An acronym for Long Edge First, when paper is placed in a print tray, the longest edge of the sheet is first and pulled into the printer by that edge.

Left Bind

The most common layout position that uses the left edge of a page as the spine, opposite of right bind.

Legal Paper

A size of paper that measures 8.5"x14".

Letter Paper

A size of paper that measures 8.5"x11".

Linen

A paper used to emulate the look and texture of cloth but not the functionality.

Loading Accessory

An item used to assist in the loading process for thinner substrates such as cloth.

Long Edge First

When paper is placed in a print tray, the longest edge of the sheet is first and pulled into the printer by that edge.

Acronym: LEF

M

M Weight

The actual weight of 1,000 sheets of any given size of paper or stock.

Magnetic

A paper or substrate that has a special back for clinging to metal.

Matte

A finish on paper or images that is dull in appearance, opposite of gloss.

Mixed Media

An option within a print driver that allows pages to be produced differently than the others without the need for stopping, options include color, B/W, stock, etc.

Also known as page setting

Mounted

The adhering of a substrate to a surface such as foam board, corrugated, gator board, glass, and more.

Mounting Adhesive

A sticky sheet that adheres to the back of a substrate to allow for a laminated, glossy board.

N

N to 1

The sorting order from the last page to the first, opposite of 1 to N.

Also known as reverse order

NCR

A thin chemically treated paper, that allows the transfer of writing, scratches, or impressions from one sheet to another, often printed in sets and as 2-part, 3-part, or 4-part.

Also known as carbonless

Newsletter

A short informational periodical presenting specialized information to a specific audience.

Normal Order

The sorting order from the first page to the last, opposite of N to 1.

Also known as 1 to n

Notecard

A small printed card with text, images, artwork, etc.

O

Offset

The process during printing that shifts one set of a completed print from the previous in order to keep them separated without the need for a slip sheet.

Offset Printing

The printing process that uses ink from a printing plate to transfer the image onto a rubber blanket and then onto the paper. This method is more common with larger quantities and can be more cost effective.

Also known as offset lithography

Opacity

The property of paper that defines the transparency of the sheet. The higher the opacity, or opaqueness, the less you can see what's printed on the second side.

Orientation

The position of a page, sheet, or artwork, commonly referred to as portrait or landscape.

Outsourced

Any activity or service that is completed by an outside organization rather than done within the organization. Often due to the rarity of the request or outside the capabilities of the organization.

Overprinting

Printing over an area that has already been printed.

P

Packet

Similar to a book, a set of printed sheets that is stapled in the corner.

Padding

The process of binding pages together on one side with glue, often used for tear pads.

Page Count

The number of pages in a book, magazine, or other printed job.

Also known as extent

Page Information

Information printed in the margin indicating the file name, date, time, and other information at the time of saving or printing.

Page Setting

An option within a print driver that allows pages to be produced differently than the others without the need for stopping, options include color, B/W, stock, etc.

Also known as mixed media

Pages Per Minute

The speed measurement of how many test pages a printer can produce in one minute.

Acronym: PPM

Pagination

1. The number of individual pages in a multi-page document.
2. The act of printing numbers on the page or sheet on a separate machine.

Pamphlet

A print that is folded and often used for informational or marketing material.

Also known as a brochure or leaflet

Pantone

A color system based on over a thousand ink colors, unlike CMYK this uses inks that have been mixed prior to printing.

Also known as pantone matching system

Pantone 186

A specific color on the pantone scale composing of: 0% cyan, 100% magenta, 81% yellow, and 4% black. This color is the specific red used by the University of Cincinnati.

Also known as PMS 186

Pantone Matching System

A color system based on over a thousand ink colors, unlike CMYK this uses inks that have been mixed prior to printing.

Acronym: PMS

Also known as pantone

Paper Posters

A paper substrate with a soft gloss coating.

Paper Weight

The thickness of paper, material, or substrate.

Also known as stock weight and weight

Parchment

A paper that emulates animal skin, often used for awards that require hand writing.

Parent Sheet

A sheet of paper that is larger than the finished cut stock of the same material.

PDF

An acronym for Portable Document File, a universal and preferred file format that maintains the format, font, artwork, size, etc. regardless of what computer it is viewed on.

Perf Marks

The dotted line on a document that indicates where to perforate.

Perfect Bind

A binding that applies glue to the spine of a book and wraps the cover around the front, back, and spine of the book to create a paperback book once trimmed.

Perforate

The process of making micro holes in a straight line to make it easier to tear.

Perforated Window Vinyl

A substrate that has tiny holes and can be mounted onto windows; the printed image is solid and opaque when viewed from the outside but transparent from the inside.

Pixel

Short for picture element, a resolvable point of an image, the basic unit of digital imaging.

Plate

A flat or cylindrical surface that bears the preproduction image or copy for printing. Used in offset printing.

Plus-Cover

A cover of a finished print that has different material or stock than the interior pages.

PMS

An acronym for Pantone Matching System, a color system based on over a thousand ink colors, unlike CMYK this uses inks that have been mixed prior to printing.

Also known as pantone

PMS 186

A specific color on the pantone scale composing of: 0% cyan, 100% magenta, 81% yellow, and 4% black. This color is the specific red used by the University of Cincinnati.

Also known as pantone 186

PNG

An acronym for Portable Network Graphics, a file format often used for photos and artwork that does not compress an image. This format is used more for image files.

Pocket Card

A small printed card with a person's name, information, or picture designated by an organization or business.

Also known as an ID badge

Polyester Display Film

A polyester substrate with a low-glare satin finish and water resistant coating, used for roll-up banners.

Also known as roll-up film

Portrait

A document layout where the height is greater than the width, opposite of landscape.

Also known as vertical

Postcard

A small printed card with a picture on one side and a place to write on the other, can also be a single-sided image, and designed to be mailed without the need for an envelope.

Pound

Similar to GSM, a unit of measurement for the weight of 500 sheets of paper, indicating the weight or thickness of a sheet of paper, often seen as 20#, 80#, etc. or as 20lb, 80lb, etc.

Also known as lb

PPI

1. An acronym for Pages Per Inch, the amount of pages in a book per inch.
2. An acronym for Pixels Per Inch, similar to DPI, this measures the amount of pixels in a digital image per inch.

PPM

An acronym for Pages Per Minute, the speed measurement of how many test pages a printer can produce in one minute.

Precision Knife

A blade mounted onto a pen-like aluminum body used for precision trimming by hand.

Also known as a utility knife, x-acto knife, and hobby knife

Presort

The process in which mail is prepared and sorted to the finest extent required by the standards for the price claimed.

Press

A production machine used for digital and offset printing.

Also known as a copier, printer, production unit, digital press, and offset press

Pressure-Sensitive

A self-adhesive material covered by a backing sheet.

Also known as a label and crack-n-peel

Print Quality

The physical appearance of a printed piece.

Print Shop Pro

An online site used for ordering, tracking, and quoting print requests.

Printer Spreads

A formatting where two pages are placed side by side in an alternating order. The last page is next to the first page on a single sheet of paper and alternating for the other side. Used most for booklets, when a page is wrapped around the middle of a sheet.

Printhead

The component of a printer that applies the image to the paper or substrate.

Process Color

The mixing of inks during the printing process to create the desired color, with the four standard colors CMYK.

Proof

A digital or physical representation of a completed product.

1. Digitally, it displays the artwork and appearance of a file.
2. Physically, it shows how the image will look when printed on the specific paper. Physical proofs can differ from the digital versions in appearance.

Pull-Up Banner

A free-standing, retractable banner that can be rolled into a compartment for easy storage and transportation.

Also known as a retractable banner, roll-up banner, and stand-up banner

Q

Quality Check

The act of checking a printed piece to ensure it meets all requirements and standards.

Quote

A rough pricing calculation for the completion of a print project.

Also known as an estimate or quotation

R

Rack Card

A printed card used for advertising or informational purposes, often long and thin in size such as 4.25"x11".

Raster Image

Images compiled using pixels containing unique colors or tonal information, they are dependent on resolution.

Reader Spreads

A formatting where two pages are placed side by side in sequential order but, leaving the first and last page separated on a single sheet. This formatting is designed for reading rather than printing.

Ream

A packaged set of blank sheets of paper, often in sets of 500 or 250.

Registration

The act of aligning two or more pages together exactly, often for two-sided printing.

Also known as alignment

Registration Marks

The lines or crosses on a sheet of paper used to ensure two or more pages are aligned.

Relay Unit

A section of a printer that decurls the printed sheet.

Resolution

Measured in DPI or Dots Per Inch, the greater the DPI the better the image quality, standard is 300dpi.

Retractable Banner

A free standing, retractable banner that can be rolled up into a compartment for easy storage and transportation.

Also known as a pull-up banner, roll-up banner, and stand-up banner

Reverse Order

The sorting order from the last page to the first, opposite of 1 to N.

Also known as n to 1

RGB

The three primary colors used in digital and some printing devices: Red (R), Green (G), and Blue (B).

Right Bind

A layout position that uses the right edge of a page as the spine, opposite of left bind.

Ring Binding

A binding that uses a circular metal ring to attach pages through a punched hole or holes, often 3 ring binders or flip cards.

RIP

An acronym for Raster Image Processor, a combination of hardware and software that sends the image to the printing device.

RIP Queue

The software used to organize and setup wide format print files.

Roll-Up Banner

A free-standing, retractable banner that can be rolled into a compartment for easy storage and transportation.

Also known as a retractable banner, pull-up banner, and stand-up banner

Roll-Up Film

A polyester substrate with a low-glare satin finish and water resistant coating, used for roll-up banners.

Also known as polyester display film

Rotation

The pivoting of an image around a central point changing the orientation.

Rush

An order request that is less than a standard three business day turnaround, often resulting in a surcharge.

S

Saddle Stitch

A book binding that folds all pages in half and staples inside the fold, most magazines use this binding.

Also known as a booklet

Safety Paper

A paper that shows signs of watermarks, fibers, or erased content, used to prevent tampering and fraud and often seen in legal documents.

Also known as security paper

Sandwich Board

A sign holder that, when open, forms the appearance of a capital "A", often used outdoors.

Also known as an A-Frame

Scale

To digitally increase or decrease the size of an image.

Scan

The use of a machine to make a digital image from the physical one.

Scoring

Indenting paper in a straight line to make folding easier and reduce cracking.

Also known as creasing

Security Paper

A paper that shows signs of watermarks, fibers, or erased content, used to prevent tampering and fraud and often seen in legal documents.

Also known as safety paper

SEF

An acronym for Short Edge First, when paper is placed in a print tray, the shortest edge of the sheet is first and pulled into the printer by that edge.

Self-Adhesive

A substrate that has a sticky back when the backing sheet is removed. This is used to adhere graphics to boards, walls, floors, glass and other surfaces and can be removable or permanent and comes in white or clear.

Self-Cover

A cover of a finished print that is the same material or stock as the interior pages.

Short Edge First

When paper is placed in a print tray, the shortest edge of the sheet is first and pulled into the printer by that edge.

Acronym: SEF

Show-Through

When opacity is low, text on the second side or sheet shows through to the front, often occurs with thin paper.

Shrink Wrap

A type of packaging that uses a clear plastic to wrap a product and shrink with heat to tightly fit on the product.

Single-Sided

Printing on only one side of a sheet of paper.

Slip Sheet

A blank piece of paper used to separate one set of work from another, often used in larger runs with multiple pages.

Slug

The amount of area or gutter outside the print area such as the artwork or crop mark.

Sort

The gathering or sorting of materials, blank sheets, or printed pages in a specific order.

Also known as collate

Spine

1. The edge of a printed set where pages are turned or flipped.
2. The element of a book that connects the book together such as a coil or comb.

Spiral Bind

A binding that uses a metal or plastic spiral through multiple holes. This allows the pages to lay flatter than other binding methods as well as spin 360 degrees around the spine.

Also known as coil bind

Spot Color

Used in offset printing, any color generated by an ink either pure or mixed and is printed using a single run.

Square Folding

A fold that squares off the spine of a saddle-stitch allowing it to lay flatter.

Stand-Up Banner

A free-standing, retractable banner that can be rolled into a compartment for easy storage and transportation.

Also known as a retractable banner, roll-up banner, and pull-up banner

Staple

A thin metal pin that attaches multiple pages together either in a corner, or side of a printed set.

Static Cling

A removable substrate that adheres to a glass surface with static. This can be easily removed and comes in white or clear.

Also known as a window cling

Step Repeat

An imposition that duplicates the image on a single sheet of paper.

Also known as 2 repeat

Stock

The paper, material, or substrate used for printing.

Stock Weight

The thickness of paper, material, or substrate.

Also known as paper weight and weight

Straight Edge

A long piece of metal engineered to allow cutting in a straight line.

Stroke

A line created on an image of various thickness.

Substrate

Any material that can be printed on such as paper, self-adhesive, vinyl, and more.

Synthetic Paper

Any non-wood or non-cloth based paper, often plastic based.

T

Tabloid Paper

A size of paper that measures 11"x17".

Tabs

A thicker paper stock with extended labels for writing or printing, used with books for section separation.

Take-Up Reel

A mechanism found on large printers designed to spool a substrate as it prints.

Tape Binding

A binding that uses a thin strip of synthetic cloth to bind the edge of the book with glue, when heated.

Also known as fastback

Template

A pre-designed layout used to digitally design or set up artwork to ensure consistency and appearance.

Tent Card

A printed product that displays information on one side and folds in the middle to allow it to stand on its own, often used for seating charts.

Text Weight

A paper that is thinner and more lightweight than cover paper.

Textile

A substrate used for printing that can be easily folded without making indents.

Also known as cloth or fabric

TIFF

An acronym for Tagged Image File Format, a file format that is neutral and compatible with all applications. This format is used more for image files.

Toner

A powder that is adhered to a sheet of paper with a drum to produce a digital image on a sheet of paper, similar to ink.

Top Bind

A layout position that uses the top edge of a page as the spine, commonly used with landscaped books when flipping pages from top to bottom.

Trademark

An exclusive right granted by law for a word, name, symbol or design, similar to a copyright.

Also seen as the symbol ™

Transparent

Low to zero opacity, see-through.

Tri-Fold

A fold that has three panels and two folds. The right panel folds inward to the left, covering the middle panel. The left panel folds inward to the right, covering the back of the right panel, often used for informational or marketing material such as a brochure.

Trim Marks

Similar to bleed marks, a small or thin line in each corner of an image indicating where to cut.

Also known as a cut mark, cut line, or crop mark

Trim Path

Cutting in a specific outlined shape or design path rather than a straight line.

Also known as a cut contour and cut path

Trim Size

The final size of a printed sheet after it has been cut.

Trimming

Slicing a sheet of paper or a stack of pages with a sharp blade to achieve a desired size or appearance.

Also known as cutting

Typo

Short for typographical error, a spelling mistake on a digital or physical piece.

U

Uncoated Paper

Paper that does not have a coating on the surface of the sheet which would have produced a smooth or glossy finish.

Uncollated

Combining sheets in a set based on the page number rather than in sequential order.

Also known as grouping

Utility Knife

A blade mounted onto a pen-like aluminum body used for precision trimming by hand.

Also known as a x-acto knife, precision knife, and hobby knife

UV Coating

A shiny and durable high gloss coating that is applied to print material, produced as liquid and cured or dried with ultraviolet light.

V

Variable Data

A form of printing where elements such as text, graphics, artwork, etc. are pulled from a database and changed from one sheet to another without stopping the print process, often used for personalized letters, mailers, envelopes, and more.

Acronym: VD

Vector File

An image that is made up of lines and/or shapes rather than pixels, can be made infinitely larger or smaller without reduction in quality.

Vellum

A paper that has a rough finish.

Velo Bind

A binding that punches holes in a book and attaches a thin flat piece of plastic along the front and back of a book.

Vertical

A document layout where the height is greater than the width, opposite of landscape.

Also known as portrait

Vinyl

A property of certain substrates that is heavier, durable, water resistant, and scratch resistant when compared to paper or bond substrates.

W

Vinyl Banner

A substrate that is heavy and durable while still flexible, used with or without grommets for indoor or outdoor banners and posters.

W

Wall Cling

Removable self-adhesive that does not damage walls upon removal.

Watermark

A transparent text or image that is embossed or printed on an image which is visible when held to the light.

Weight

The thickness of paper, material, or substrate.

Also known as paper weight and stock weight

Wide Format

The printing of any material that is larger than a digital or offset printer, typically larger than 12"x18".

Also known as large format

Window Cling

A removable substrate that adheres to a glass surface with static. This can be easily removed and comes in white or clear.

Also known as a static cling

With the Grain

Folding or feeding sheets of paper parallel to the grain of the paper.

Wove

A smooth paper with a gentle patterned finish.

Writing Paper

A paper that is usually high in cotton fiber, used more often with stationery and basic prints.

Also known as bond

X

X-Acto Knife

A blade mounted onto a pen-like aluminum body used for precision trimming by hand.

Also known as a utility knife, precision knife, and hobby knife

Y

Yard Sign

An image printed on self-adhesive and mounted on a corrugated board, attached to the ground with a metal "H" stake.

Z

Z-Fold

A fold that has three panels and two folds opposite of one another creating a "Z" shape.

Zip

One or more compressed files in a smaller archive to take up less space for storage or file transfers.
