Terrazzo Flooring | 09 66 00

The following information shall be included in specifications prepared for use on all University of Cincinnati construction and renovation projects. This information is supplemental and not intended to be a complete specification.

EXECUTION STANDARDS

Construction & Installation
Terrazzo floors separated from the structural slab by a sand cushion are preferred over thinset terrazzo systems. Approximately 2-3/4 inches shall be allowed from rough slab to finish floor.

Thinset Floor Topping - If design conditions, or budget, dictate thinset method of installation, marble chip or ceramic granule toppings may be installed with chemical matrix or with cement, provided such methods and materials are approved by the University Architect.
